1. Introduction to HTML

Published: August 7, 2026

HTML, or HyperText Markup Language, is used to create the basic structure of webpages. Elements such as <header>, <main>, and <footer> help organize different parts of a webpage.

By using simple HTML elements, developers can create webpages that are easy to read, understand, and display in web browsers.

2. HTML Forms and User Input

Published: August 5, 2026

HTML forms allow websites to collect information from users. Text fields, email fields, selection boxes, and text areas can be used to create simple and useful forms.
